European Alps in 1993.

What was different about this body when they first found it?

It was mummified

What type of evidence was at the site?

A body buried in the ice.

What evidence suggested the body was very old?

Flint, axe. They could tell by the

List all the artefacts found at this site.

Flint, axe.

What did they do wrong when recovering the body?

They tried to get it out with a pneumatic chisel. Brought no special equipment – used skiing equipment to get it out. They didn't think it might be an historical curiosity.

What was the mystery regarding the glacier where the Ice Man was found?

Using the evidence, what was one of the theories of where he lived and when? (how old and what time period)

2000BC. Looking at the artefacts – shape of the Bronze tool he had. Early autumn – based on pollen.

What is one theory of how he died? (Use the evidence)
